

4-4：检查服务状态

1) 使用SCOM监控

SCOM 2012 R2基础运维实战分享视频教程（共20课时）_在线自学视频教程_51CTO学院 http://edu.51cto.com/course/course_id-3387.html

2) 使用powershell

获取当前AD的服务状态

可以使用displayname属性去查

```
PS C:\Users\Administrator> Get-Service -DisplayName "*Directory*"
```

Status	Name	DisplayName
Running	ADWS	Active Directory Web Services
Running	NTDS	Active Directory Domain Services

查询远程DC

```
Get-Service -DisplayName "*Directory*" -ComputerName dc01.contoso.com
```

```
Get-Service -DisplayName "*Directory*" -ComputerName dc02.contoso.com
```

```
Get-Service -DisplayName "*Directory*" -ComputerName dc03.contoso.com
```

```
Get-Service -DisplayName "*Directory*" -ComputerName dc04.contoso.com
```
