5-1: 在线降级域控制器

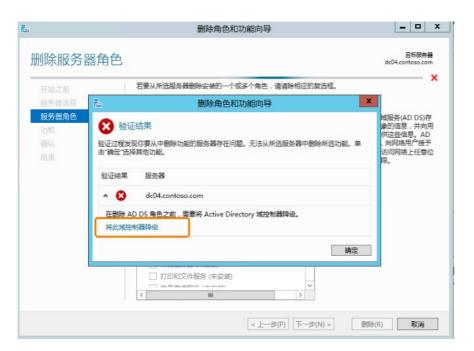

1) 在线降级是推荐的做法,降级之前要确保AD上没有驻留其他的服务,比如DHCP、CA、SMTP等;

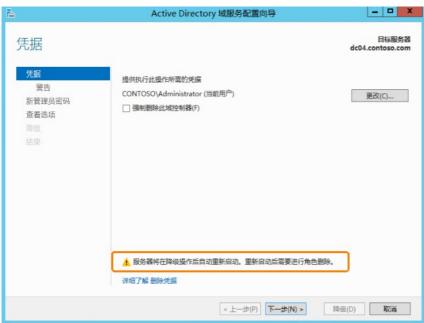

一旦有驻留的服务,要么做服务的迁移,要么DC下线以后,暂时保留DC所在的服务器

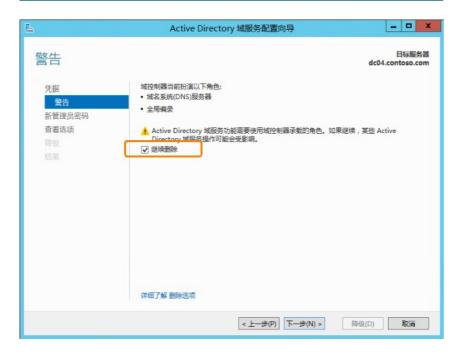

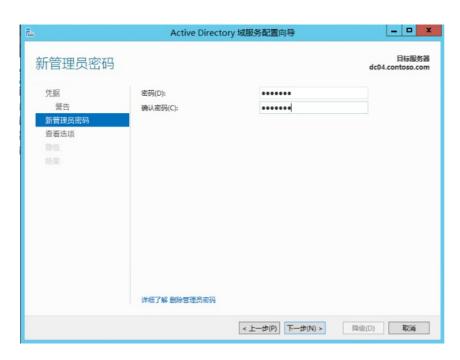

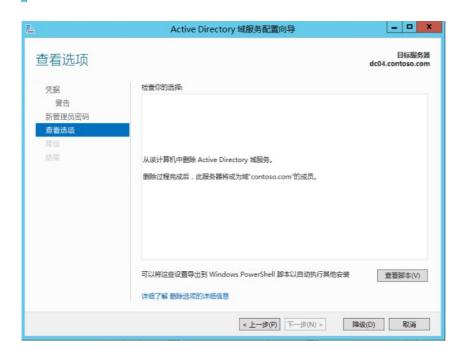

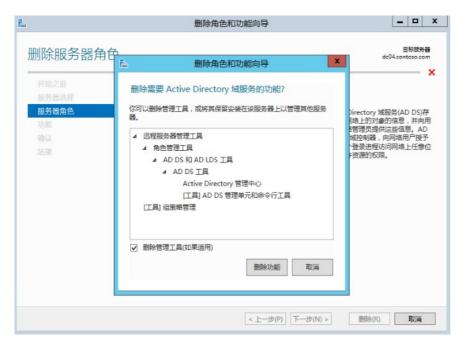

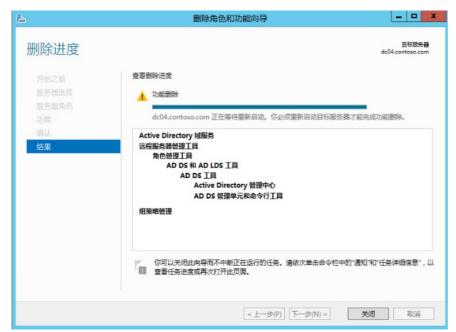

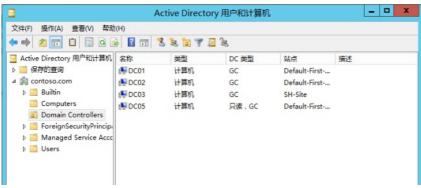

重启之后,检查AD UC里面的DC所在的OU,发现已经没有DCO2了。

查看AD站点和子网,对于DC02的站点复制链接可以手动删除清理,也可以等待站点复制间隔进行自动刷新清理。
